

## CerPU

**EUROGOMMA** manufactures moulded **Polyurethane** sheet liners inclusive of **Silicon Carbide** tiles giving unbeatable wear resistance properties.

The mixed use of polyurethane and Silicon Carbide offers the following advantages:

- Easy installation with bolting through the polyurethane layer
- Fair flexibility of the sheet lining thanks to presence of polyurethane all around the Silicon Carbide tiles
- Longest wear life thanks to the abrasion resistance of Silicon Carbide and Polyurethane

**CerPU** sheets are manufactured on the base of client needs and are pre-formed in order to find right fitting on every surface and permit the placement of grooves for bolting in the product.

Maximal dimensions of the **CerPU** sheets are 1000 x 1000mm

Thickness raises from 20 to 30mm

Below is an example of a **CerPU** sheet showing the coupled interaction of Polyurethane and Silicon Carbide
