

# EUROGOMMA

**HERCULES** are the 305x305mm polyurethane screen panels for the super heavy impact areas.

**HERCULES** can receive big falling rocks, fast running stones falling from chutes and conveyor belts and big materials with high bulk density.

No other product can beat **HERCULES** screens in resisting big impacts.

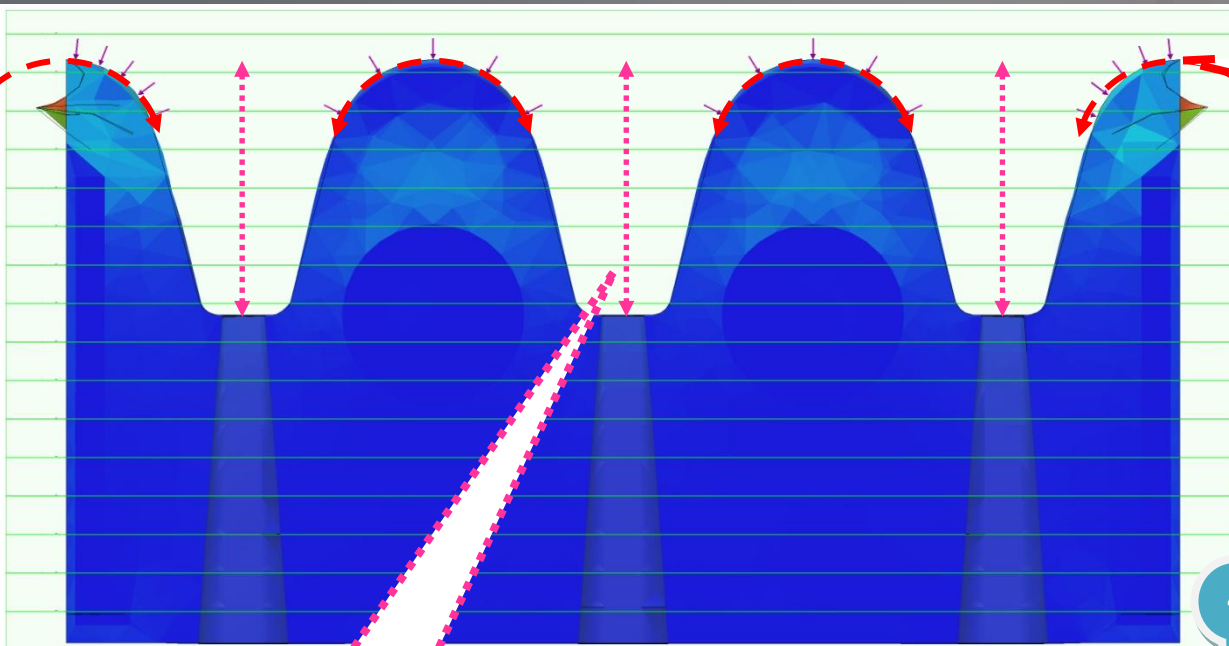

**HERCULES** screen panels are designed to receive big loads and absorb impacts without damaging the screening areas.

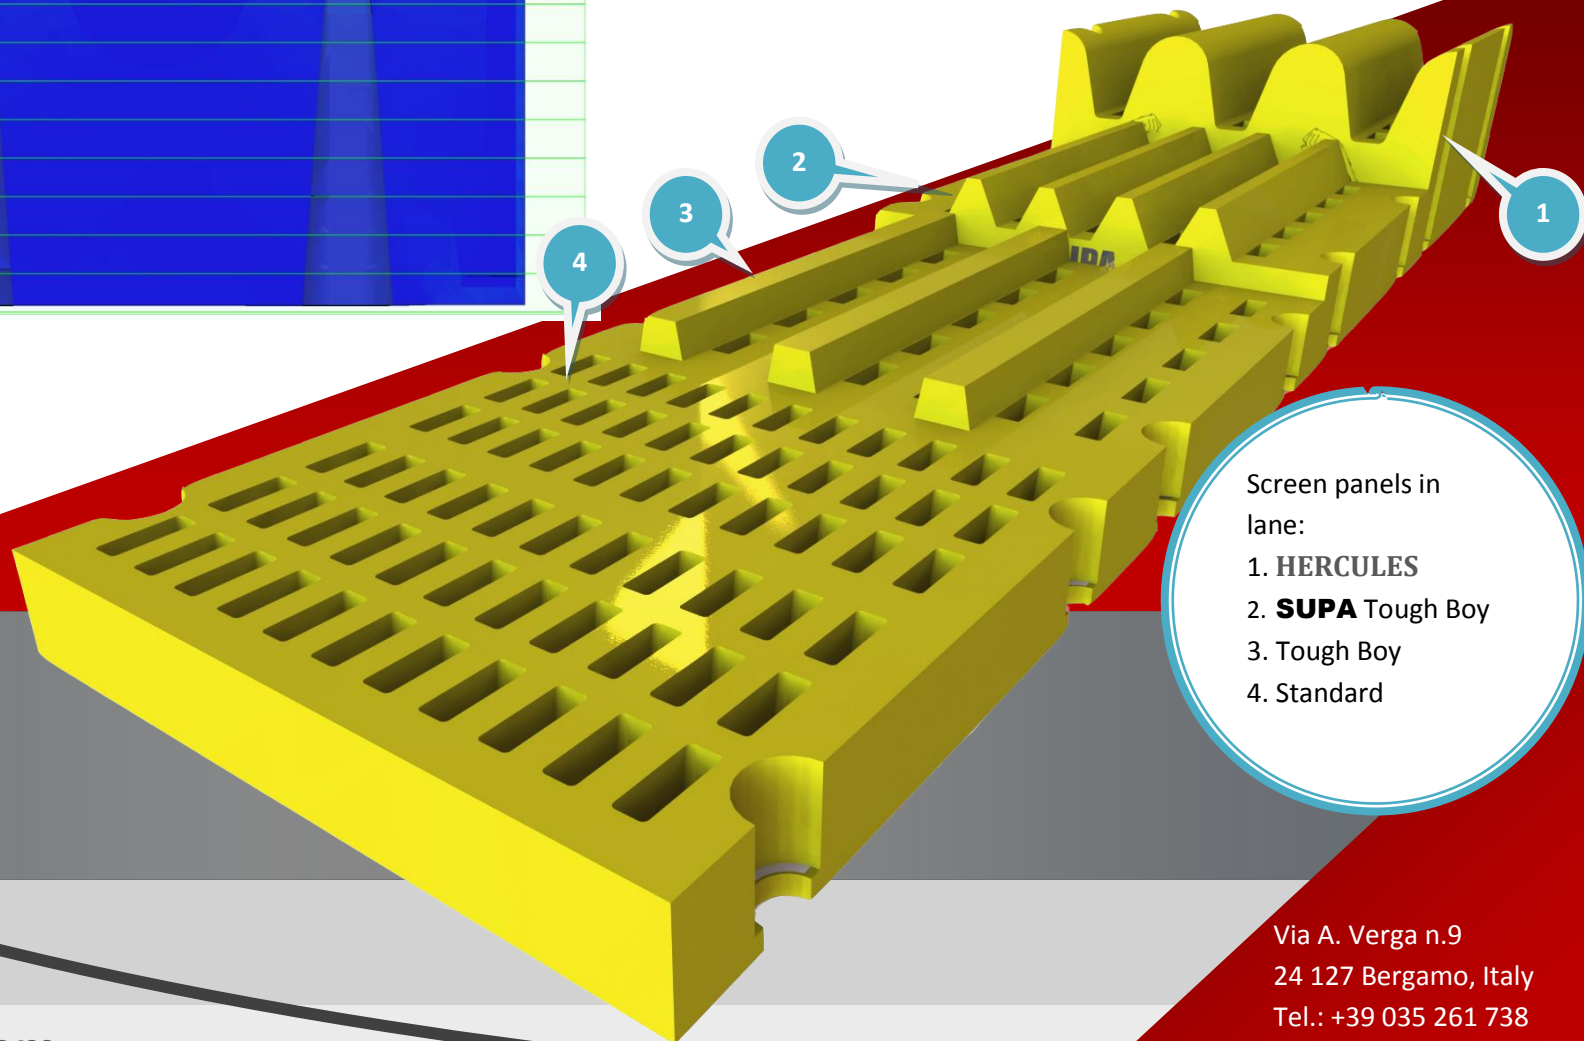

*Unbeatable wear resistance*

The arched section of the bars is designed to release the impact force of falling rocks along the sides of the bars

The high distance between the top of the bars and the screening surface avoid the big and heavy rocks to impact on the screening apertures

Screen panels in lane:

1. **HERCULES**
2. **SUPA** Tough Boy
3. Tough Boy
4. Standard
