## Lock-out clamping system

### fitting EURO-PS screen system

How many times have you considered that installing screen panels with pins and sleeves is very comfortable and fast but de-installation makes you crazy because of the difficulty to extract pins from sleeves?

**EUROGOMMA** is aware of this problem and has worked at a practical solution to make all the users of our **EURO-PS** screen panels (305x305mm standard) happy with de-installation too.

In this view our **Lock-out clamping system** was designed and engineered.

Hammer is all you need to install and de-install the system from the top of deck.

Be happy! Your problems are over... at least in this case.

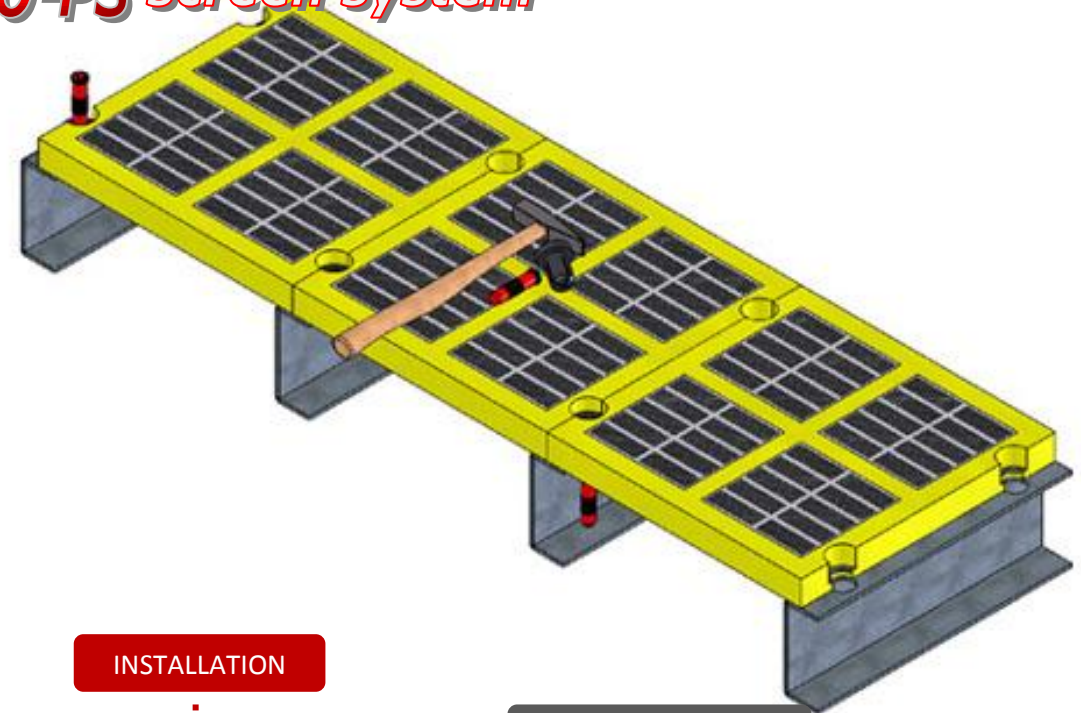

#### INSTALLATION

Hammer the lock-out pin into the sleeve. Use a M14 or M16 bolt between the hammer and the pin so to push the pin totally into the sleeve

#### DE-INSTALLATION

Hammer the lock-out pin out of the sleeve. Use a M8 or M10 screw between the hammer and the pin so to push the pin totally out the sleeve

INSTALLATION

DE-INSTALLATION
