

EUROGOMMA

Polyurethane pipe lining

EUROGOMMA lines steel pipes with our famous wear resistant polyurethane for application in mining and quarrying.

Our lining is excellent to resist the aggression of abrasive slurry with a temperature range from 5°C to 45°C.

We can line steel pipes with outside diameter (OD) from 200mm up 800mm and unit length up to 4 meters.

Alternatively we can manufacture polyurethane hoses to fit into the steel pipe, so to make it wear and corrosion resistant liner.
