

EUROGOMMA

Polyurethane Impact bars

EUROGOMMA is the Manufacturer of unique elastic polyurethane impacts bars.

These bars offer relevant advantages in comparison with standard rubber + UHMW bars.

In fact our *Superelastic* polyurethane joins excellent impact resistance (comparable to rubber) to high surface slickness. That is why the wear thickness of our polyurethane bars is extremely higher (**usually over 500%**) than standard rubber + UHMW bars.

In fact it is not necessary to use an elastomer to give the cushion effect and a top plastic layer to contain friction force between belt and impact bars but our *Superelastic* polyurethane gives both the cushion and the low friction characteristic.
