Polyurethane pressure transfer sleeve for Python Pinch Press

Pressure transfer sleeves for Python Pinch presses are subjected to significant pressure. For this reason it is extremely important to produce sleeves owning superior tensile strength and elasticity. Our **Superelastic** polyurethane wholly fits these requirements and that's why we successfully apply it in the Manufacturing of pressure transfer sleeves.

For that reason we manufacture sleeves with a single casting method avoiding junctions in the product. The absence of junctions creates the elevated structural strength of our sleeves. The result is long life and excellent performing qualities!
