

# Polyurethane modular screens

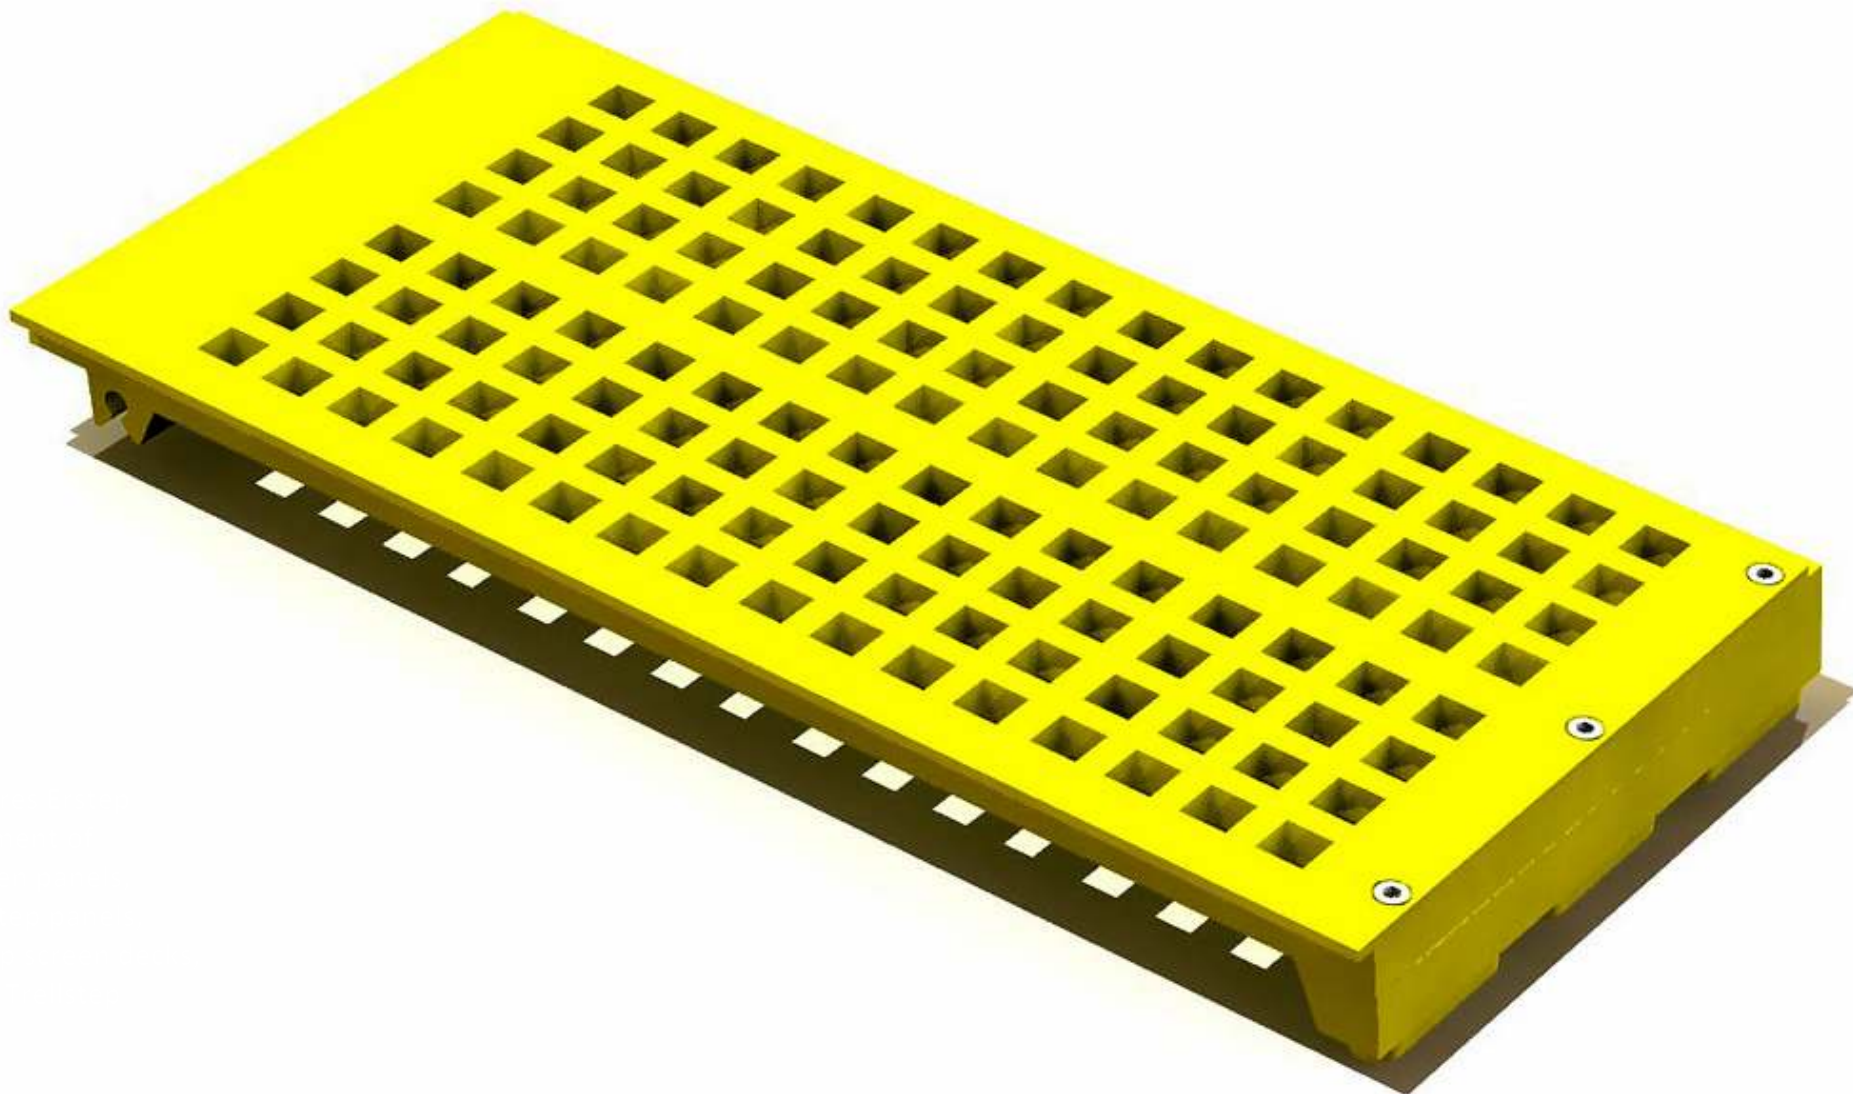

**ER Step** is the stepping modular screening system of the company **EUROGOMMA**

**ER Step** is based on the standardised modular dimensions 300x600mm

These sizes can typically fit the most of the vibrating screen decks and the addition of modules 100x600mm and 150x600mm make

**ER Step** suitable to every screening application.

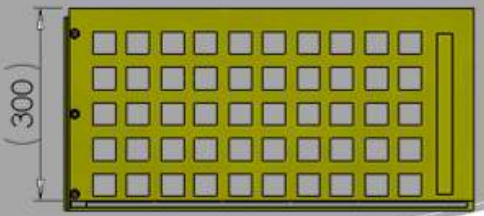

**ER<sub>Step</sub>** is suitable to the following installations:

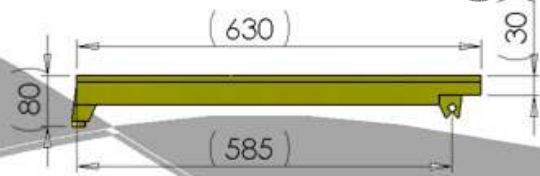

- Dewatering
- Fine screening
- Medium screening
- Gross screening

**ER<sub>Step</sub>** can be installed in both wet and dry screening. In fact **ER<sub>Step</sub>** modular screens can be offered with our special **ZigZag** and **Superflow** apertures making this system ideal to afford sticky and clogging materials.

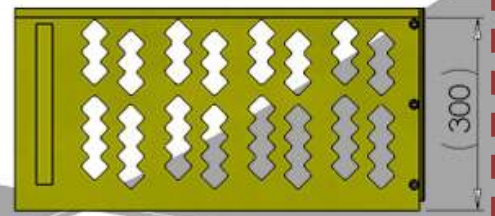

### Wet screening

### Gross screening

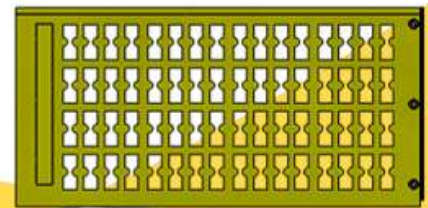

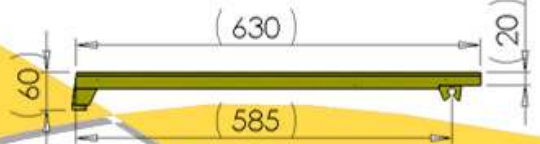

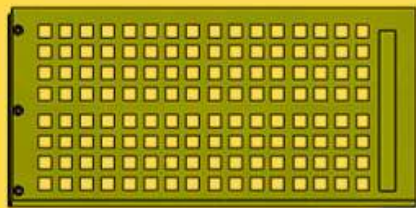

### Dry screening

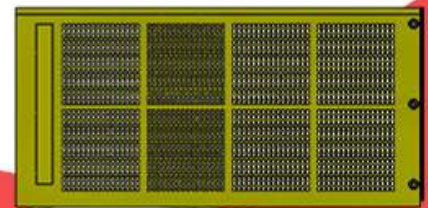

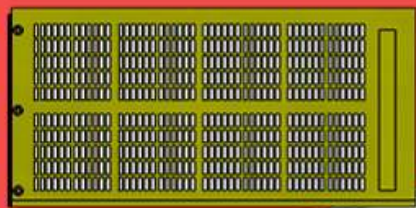

Zig Zag apertures

### Medium screening

Superflow apertures

### Fine screening

Superflow apertures

### Dewatering

In case you think that **ER<sub>Step</sub>** is similar to other famous step screens you will probably change your mind.

In fact **ER<sub>Step</sub>** is characterised by the fact that the rear sitting bar is not part of the screen panel as the rear bar is bolted to the screen panel by our team.

This means that at the end of the life of every **ER<sub>Step</sub>** screen panel you can detach the rear bar and screw it to a brand new panel. Of course, you are free to decide if detaching the bar or simply wasting the entire screen module.

However the reuse of the rear bar reduces the panel price of ca. 10%

The choice is yours but we believe that the cost reduction policy of many of our clients will probably make you appreciate this option.
