

EUROGOMMA

EURO-PS Roll on!

Polyurethane modular screens

The **EURO-PS Roll on** polyurethane screen panels are an invention and unique product of **EUROGOMMA**.

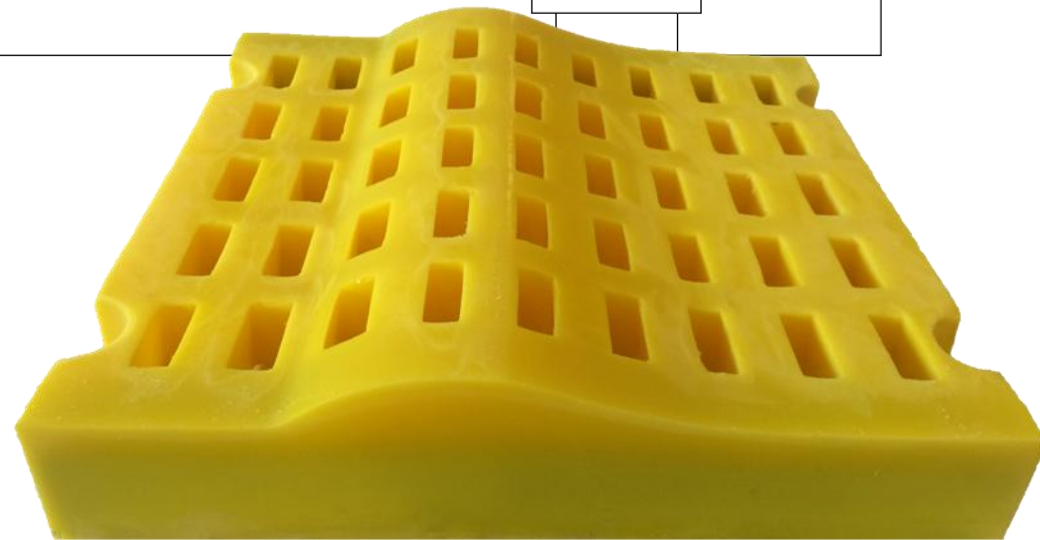

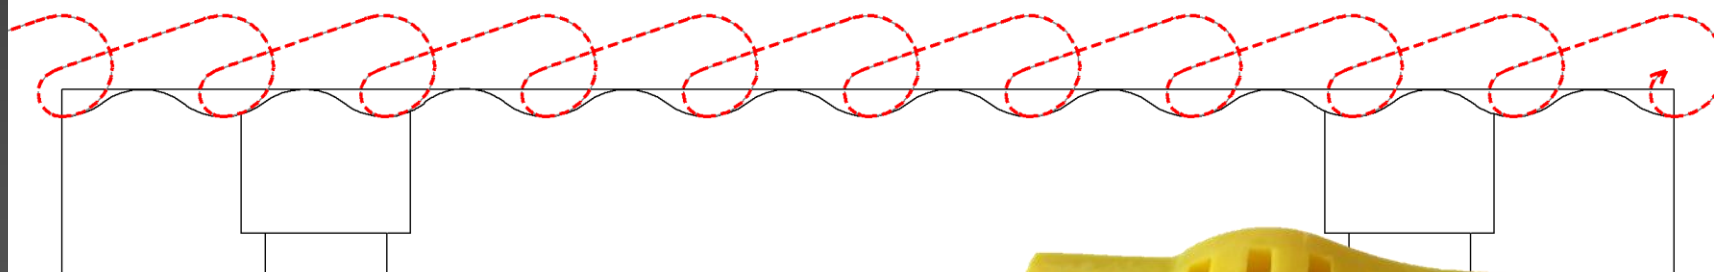

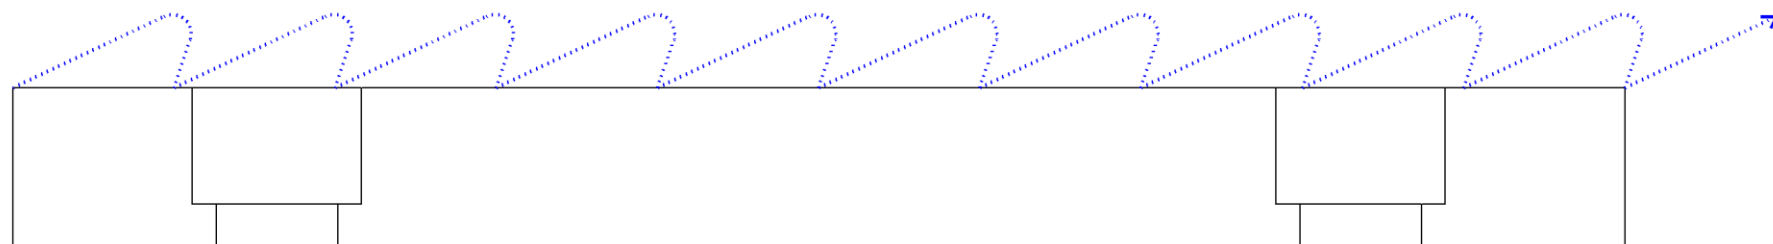

This product is specifically designed for linear motion horizontal screens where material flows in layers keeping the fines on top.

Our **EURO-PS Roll on** modular screen panels are designed with one or several bumps along the flow so to make the processed material roll on them.

The rolling effect offers two important benefits:

1. Fines are transported from top layer to the bottom permitting their classification across screening apertures
2. Material self-cleaning

At last but not least the bump design improves the available surface increasing the number of screening apertures and the open area ratio.
