

# EUROGOMMA

## *EURO-PS non-blinding*

### *Polyurethane modular screens*

**EURO-PS** is the most versatile and modular system of **EUROGOMMA**

This characteristic make **EURO-PS** one of the most diffused screening system both in aggregate and mineral processing.

For this reason **EURO-PS** is available with special non-blinding apertures for all those installations where sticky, pegging and aggregating material typically peg into square and round apertures.

**ZZ** and **Superflow** apertures permit our **EURO-PS** screen panels to offer excellent screening performances wherever these problems occur.

A full range of aperture dimensions and design are available to our clientele
