

EUROGOMMA

Poyurea sprayable coatings

EUROGOMMA is proud to offer to our accredited clientele a Polyurea sprayable coating service for several wear and corrosion resistant applications.

A range of 6 different Polyurea materials and the application through an experienced and competent team of technicians assure the perfect application in every situation.

Available materials are:

Werutec 7200

WERUTEC 7200 is a liquid-impermeable, crack-bridging polyurea coating on concrete, cement, steel and other surfaces in the design area where high abrasion resistance demanded is used. WERUTEC 7200 is used to protect concrete tanks, floors in parking garages, industrial, animal enclosures, stables, horse boxes, steel hoppers, chutes, buckets, water treatment plants, steel pipes, oil separators, Docks, silos, loading platforms of trucks, contact with soil structures and much more.

Objects evenly, following surface, seamlessly and over cracks against a variety of chemicals, pollutants and water reliably and permanently protected.

The full-surface adhesion to the substrate prevents underflow, and the seamless connection to installations and structures as well as the constructive Joint integration give a reliable protection for complex constructions. WERUTEC 7200 can be processed even at high humidity

Werutec 7500

WERUTEC 7500 is a liquid-impermeable, crack-bridging polyurea coating on concrete, cement, steel and many other surfaces. WERUTEC 7500 with or without geotextile for protection of concrete tanks, parking garages, retaining walls, shafts, wells, water treatment plants, Steel pipes, oil separators, docks, silos, loading platforms of trucks, contact with the ground buildings and so forth. Furthermore, the system is used as a flat roof waterproofing, Wood coating and in industrial floor area.

Objects evenly, surface following, jointless and covers over cracks against a variety of chemicals, pollutants and water reliably and permanently protected.

The full-surface adhesion to the substrate preventing underflow, and the seamless following installations and structures and the constructive involvement of joints give a reliable protection for complex constructions.

WERUTEC 7500 is processed even at high humidity

Werutec 7800

WERUTEC 7800 is on a liquid-impermeable, crack-bridging polyurea coating Concrete, cement, steel and other surfaces in the field of construction used. WERUTEC 7800 has an extremely high elasticity and is an excellent coating combination with geotextiles (sump). The combination / application on extruded insulation boards and sprayed polyurethane foam unique. Applications range from concrete tanks, dams, wells, water treatment plants, wood coatings where a high elongation is required, fish pools, swimming pools (here please consult us), oil separators, port facilities contact with the ground buildings, etc. In addition, the system finds application as roofing existing substrates like old bituminous roofing membranes, PVC films and OSB KLH composite wood panels. Objects evenly, following surface, seamlessly and over cracks against a variety of chemicals, pollutants and water reliably and permanently protected. The full-surface adhesion to the substrate preventing underflow, and the seamless connection to installations and structures as well as the constructive joint involvement found safe Protection for complex constructions. WERUTEC 7800 can be processed even at high humidity.

Werutec 7900FX

WERUTEC 7900FX is a liquid-impermeable, crack-bridging polyurea coating used on concrete, cement, steel and other surfaces in the design area. WERUTEC 7900FX has an extremely high elasticity and is an excellent

coating combination with geotextiles (sump). The combination / application on extruded insulation boards and on sprayed polyurethane foam is unique. Applications in the field of foam furniture, wood coatings where a high elongation is required, etc. The full-surface adhesion to the substrate preventing underflow, and the seamless connection to installations and structures as well as the constructive joint involvement found safe Protection for complex constructions. WERUTEC 7900FX can be processed even at high humidity

Werutec VB75

WERUTEC VB75 is multifunctional usable on variety of substrates such as Concrete, screed, mastic asphalt (interior surfaces), Latexfalt, wood, steel, aluminum; magnesite and anhydrite also can be coated. The high impact resistance of the coating in combination with very high compressive strength and crack bridging yield an economically optimal surface protection system for production areas, warehouses, exhibition halls, garages, exhibition and retail space in the new building and especially in the renovation.

With the high quality coatings WERUTEC VB75 additional surface optimizations such as gloss, color retention and yet achieves better abrasion and chemical

Werutec 7300

WERUTEC 7300 is an extremely fast curing, 100% solid elastic 2K Polyurea Spray elastomer which both independently and in combination with other Materials for producing coatings, liners, wear blankets and resilient surfaces on a variety of substrates can be used.

WERUTEC 7300 was specifically designed for use for abrasion-resistant constructions, where a flexible coating with good elongation and moderate chemical resistance is required.
