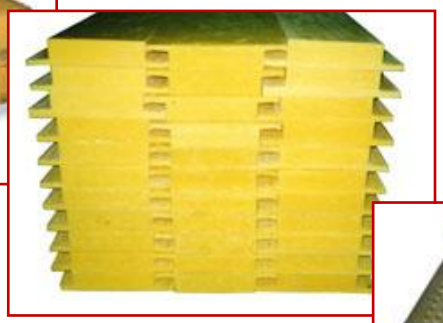
EUROGOMMA

Polyurethane Mill liners

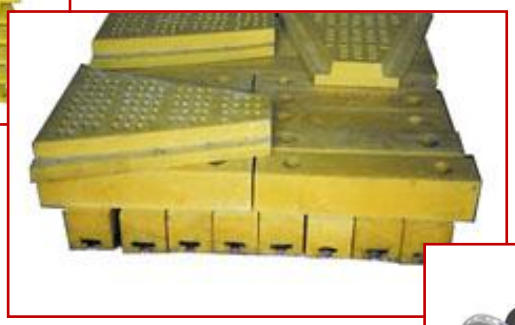
Steel, Rubber and hybrids of these materials are traditionally utilised in Mill Lining to increase the Wear Life and to reduce shutdowns.
EUROGOMMA is the only Manufacturer manufacturing Mill liners made of Polyurethane.
Why?! The reason is simple. **EUROGOMMA** formulates an unique kind of Polyurethane being elastic, resilient and therefore impact resistant but having abrasion resistance higher than any Rubber in the market of Wear protection.
A lowest wear life's increase of 60% - 70% and no reduction of the Mill grinding performance are the verified results of tests comparing our Polyurethane Liners to the most appreciated Rubber ones.

PRODUCT RANGE



A complete range of customised polyurethane **Lifter Bars, Shell Liners, Head Liners, Grate Liners** and steel **fasteners** are available.

Our Mill liners are extremely appreciated for their high abrasion resistance coupled by an excellent resilience further than avoiding any premature liner's failure due to **oil, ozone, acids or chemical solutions.**



APPLICATION REQUISITIONS

Our Polyurethane Mill Liners can be installed in the following wet grinding mills:

- Secondary and tertiary ball Mills
- Primary Ball Mills
- Rod Mills
- SAG Mills
