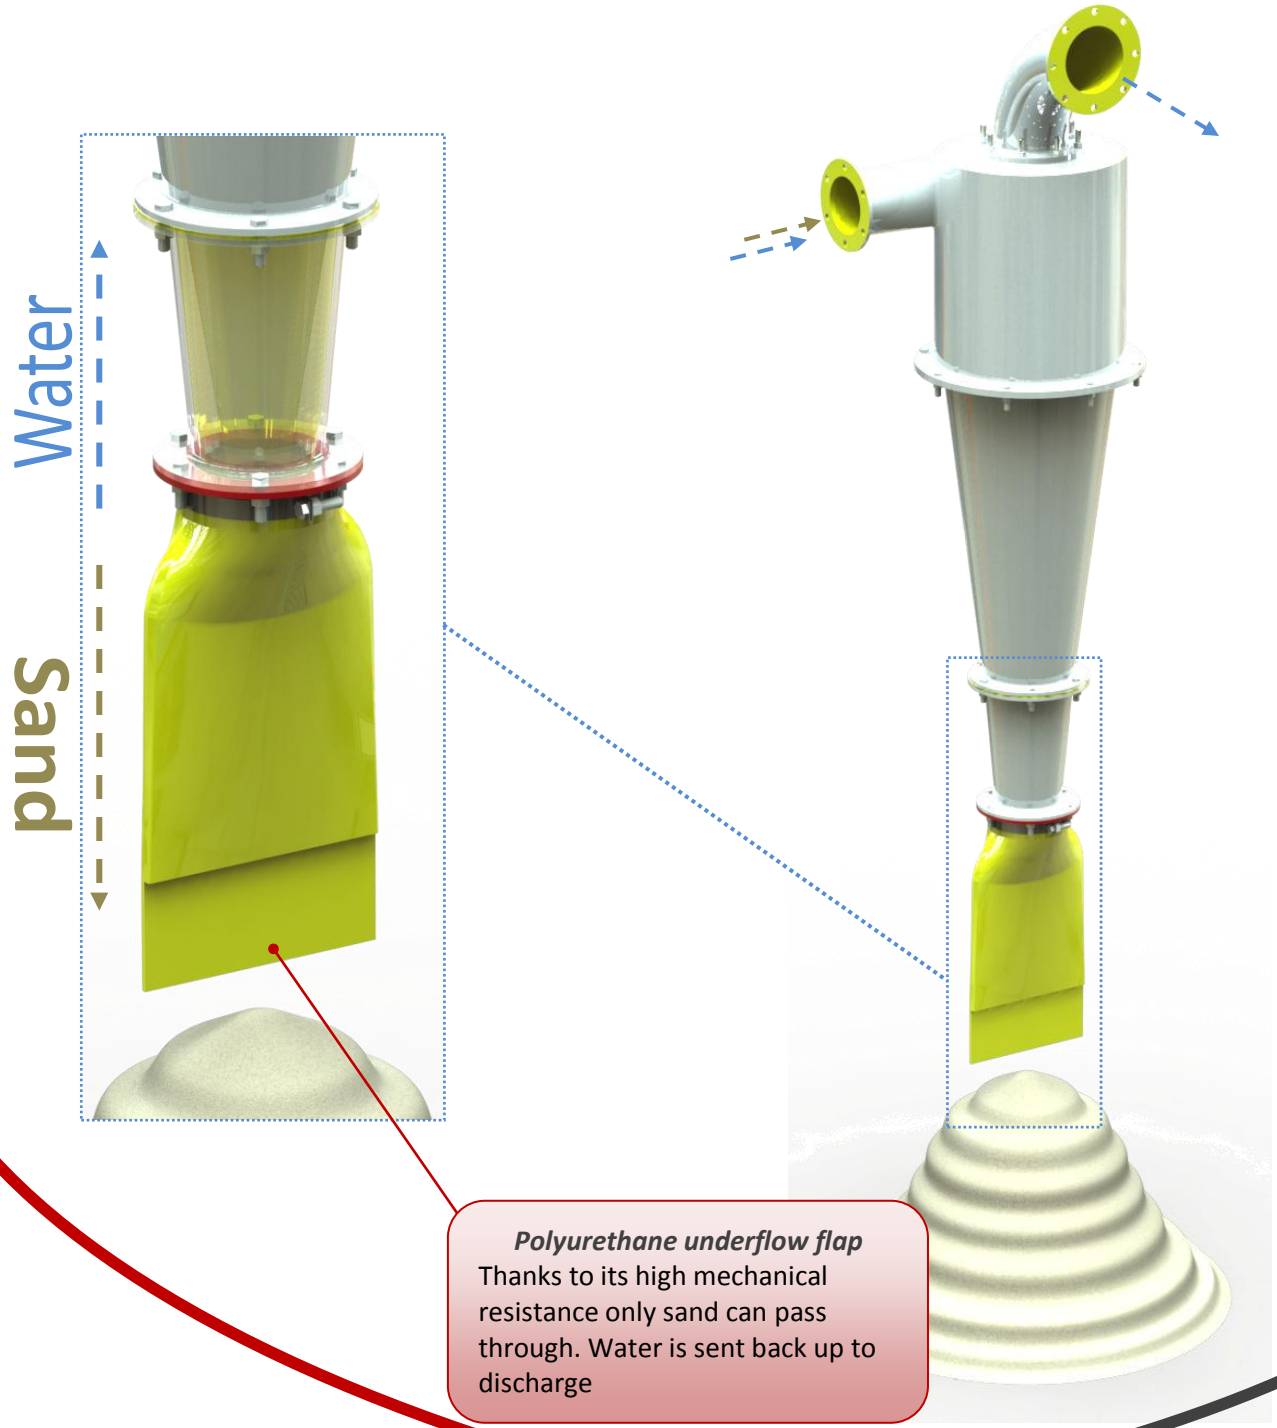
EUROGOMMA

Polyurethane cyclone underflow flaps

Cyclone dewatering with polyurethane underflow flaps is easy and economical.
Our polyurethane underflow flaps have very high mechanical resistance permitting sand passing through and sending back water to discharge.
Thanks to their adoption you can stop using dewatering screens or relevantly decrease the water charge on screen decks solving every dewatering problem.



Polyurethane underflow flap
Thanks to its high mechanical resistance only sand can pass through. Water is sent back up to discharge

Here are some few examples of underflow flap aiding cyclone dewatering:

Our polyurethane underflow flaps are customized to fit every cyclone size and model!
