

EUROGOMMA

Polyurethane spare parts for Flotation Cells

EUROGOMMA manufactures and supplies a large range of Polyurethane Rotors, Stators and other related spare parts for flotation cells.

The great abrasion and corrosion resistance and the excellent resilience of our **SUPERELASTIC** Polyurethane permits our parts to last much longer than any competing product in every processing application (gold, copper, phosphate, silica, fluorite...)

Documented tests demonstrate that our Rotors and Stators last between **200% > 300%** longer than the original Rubber items.

When comparing our parts to others lined with Polyurethane it is noticeable a longer wear life of our products of **50% or more**.

We have available Polyurethane parts to all the major flotation cells in a range from 66" up to 190"

All these parts have been successfully tested.
